

Kwinana Freeway Northbound Widening Russell Road to Roe Highway

Dust Management Information Sheet

The Kwinana Freeway Northbound Widening project, from Russell Road to Farrington Road, is part of a \$2.3 billion package of road and rail infrastructure projects funded by the Australian (\$1.6 billion) and State (\$750 million) Governments.

Upon completion, the project will reduce travel times, address congestion and improve safety for freeway road users, particularly in morning peak periods.

The southern section of these works, between Russell Road and Bolderwood Reserve, is being delivered by BMD Constructions on behalf of Main Roads.

Construction activities are scheduled to commence on this section in October 2018 and finish by early 2020.

During the summer months, dust can become a problem in the hot and dry climate that is characteristic of Perth.

During these months, the project team will closely monitor the amount of dust generated from our construction activities.

To manage dust generated by the construction activities, BMD has prepared a Dust Management Plan.

This plan is compliant with current Environmental Protection Authority guidelines.

BMD will also regularly monitor environmental factors that can impact on dust levels such as forecast strong winds.

We will also conduct regular surveillance of dust levels around the construction works.

Where necessary, BMD will proactively implement controls and modify construction activities to reduce the likelihood of generating dust.

Further information

If you require additional information about how the project is managing dust, please call the project information line on **138 138** or email enquires@mainroads.wa.gov.au
